APPLIES TO

All CPLA curriculum prior to release or wide adoption

Revision History

VERSION	DATE	AUTHOR	SUMMARY OF CHANGE
1.0	2026-07-29	CPLA Quality Assurance	Initial issue of the IER Program Standard.

1. Purpose

The CPLA Instructor Experience Reviewer (IER) Program provides independent, professional evaluation of the instructional experience from the perspective of an educator who is actively teaching within the discipline. The reviewer evaluates the effectiveness, usability, organization, and instructional value of CPLA learning materials before curriculum is released or widely adopted.

Unlike curriculum validation, which verifies the **accuracy** of content, the Instructor Experience Review verifies that the curriculum is **practical, intuitive, teachable, and supportive** of instructors with varying levels of teaching experience. Together, the two review types establish that CPLA validates not only what is taught but whether it can be taught well.

2. Objectives

The Instructor Experience Reviewer evaluates whether the CPLA instructional system:

- prepares instructors effectively before class
- supports instructors during class
- reduces lesson-planning time
- promotes consistent instructional quality
- anticipates common student difficulties
- provides sufficient teaching guidance
- improves instructor confidence
- supports experienced professionals who may have limited formal teaching experience

3. Primary Responsibilities

The reviewer is expected to:

- teach or simulate teaching selected CPLA lessons
- evaluate Studio Director usability
- evaluate Instructor Guide usefulness
- evaluate Student Lesson organization
- evaluate classroom workflow
- evaluate assessment clarity
- identify missing instructional tools
- recommend improvements and document observations objectively

4. Areas of Evaluation

Lesson Preparation

Can an instructor prepare effectively without reading the entire student lesson?

Classroom Delivery

Can the instructor comfortably teach using the available materials?

Student Engagement

Will the lesson likely maintain student attention?

Instructional Support

Does the guide tell the instructor what to say, what to demonstrate, what to emphasize, what misconceptions to expect, and what successful work looks like?

Assessment

Can student understanding be evaluated fairly?

Navigation

Is information easy to locate during preparation and during class?

Professional Value

Would another instructor actually want to use this system?

5. Reviewer Qualifications

Preferred reviewers bring professional knowledge of the discipline together with teaching or instructional-design experience. Suitable reviewers include:

- college instructors
- high-school CTE instructors
- industry professionals
- curriculum specialists
- instructional designers
- subject-matter experts

6. Evaluation Methodology

Reviews are conducted as a **limited pilot**, not as ordinary user access. Each reviewer is given a controlled set of approximately three connected lessons chosen to represent different instructional demands — typically one concept-heavy, one demonstration-heavy, and one production-heavy lesson. A small, deep review produces far more reliable feedback than a superficial pass across an entire volume.

Reviewers are asked first to **use what exists** and to document actual moments of friction encountered while preparing and while imagining teaching in front of students — for example, “I was trying to prepare for the demonstration, but I could not find...” Feedback tied to a real task is markedly more reliable than general feature ideas, so task-anchored observation is required before open-ended suggestions.

Where the platform permits, reviewers exercise instructor customization — personal teaching notes, timing adjustments, anticipated misconceptions, alternative examples, and section flags. Reviewer changes are stored as the reviewer's own instructor layer and must never overwrite the authoritative CPLA curriculum.

7. Expected Deliverables

Each review produces:

- a completed Instructor Experience Evaluation Form (CPLA-FRM-IER-001)
- written observations tied to specific moments of use
- suggested improvements with priority levels
- an overall release recommendation

8. Confidentiality

CPLA curriculum, guides, and platform materials provided for review are pre-release, proprietary, and confidential. Reviewers agree to use the materials solely for the purpose of evaluation, not to reproduce or distribute them, and to treat all lesson content and platform functionality as confidential until CPLA authorizes wider release.

9. Relationship to the CPLA Standards Library

This Standard is issued alongside its companion instrument, the Instructor Experience Evaluation Form (CPLA-FRM-IER-001), and is designed to serve as the template for future review standards as they are needed. It establishes that CPLA follows a documented, repeatable process for developing, validating, and continuously improving both the accuracy and the teachability of its curriculum.

10. Reviewer Acknowledgment

By signing below, the reviewer acknowledges that they have read and understood the CPLA Instructor Experience Reviewer Program Standard and agree to conduct their review in accordance with it, including its confidentiality provisions.
